## ABOUT THE INDEX

This 27 Volume Index to the *Journal of Research on the Lepidoptera* is organized into four parts: author index, family/genus index, geopolitical index, and miscellaneous subject index. Each part is organized to provide the maximum usefulness within the limited space considerations. A description of each index, with its contents and possible uses, follows:

### Author Index

This is a complete index to the *Journal of Research on the Lepidoptera*. All articles, book reviews, notes and opinions published in volumes 1-27 are included. The citations are alphabetical by first author with cross-referencing for other authors.

### Family/Genus Index

Whenever possible, each published article has been indexed by the taxa discussed. The citations are alphabetical by family/genus. Note that the nomenclature conforms to that in use at the time of article's publication; some cross-referencing, within families, may be required to find all articles pertinent to a given taxa. This is not a complete index as many articles do not contain a specific reference to species, genus or family. After locating the articles of interest in this index, the user should also refer to the author index for other possible publications.

### Geopolitical Index

Regional studies (i.e. checklists) and newly described taxa are indexed by geographical/geopolitical region. The citations are grouped by continent and/or geographic region and then by country. Within the United States, the articles are further indexed by state. Again, this is not a complete index and should be used in conjunction with the author index.

### Miscellaneous Subject Index

This index includes many articles of general interest which would not be found in the taxa or regional indices. Articles included are bibliographies, book reviews and opinions as well as topics of special interest such as aberrants and gynandromorphs as well as genetics and general laboratory techniques. All articles describing new taxa are also included. The subjects have been grouped into rather broad headings to eliminate cross-referencing. Only a small portion of the articles are included in this index. Again, we suggest that you refer to the author index for additional articles of interest.

## TECHNICAL INFORMATION

Data management for this index was performed on an IBM PC-XT in DBase III+ (Ashton-Tate). Final camera-ready copy was prepared in Word Perfect 5.0 (Word Perfect Corp.) and printed on a Laserjet IIP (Hewlett-Packard).

## ELECTRONIC COPIES AVAILABLE

This index is available in electronic form for IBM compatible computers with DBase III+, or IV. The database file contains author(s), year, title, volume, number and pages. The file is suitable for preparation of bibliographies and can be searched using wildcard queries, etc. DISKETTE COPIES (PLEASE SPECIFY 5.25 INCH OR 3.5 INCH) ARE AVAILABLE FOR \$10.00 FROM: THE LEPIDOPTERA RESEARCH FOUNDATION, INC., THE JOURNAL OF RESEARCH ON THE LEPIDOPTERA, 9620 HEATHER ROAD, BEVERLY HILLS, CALIFORNIA 90210.

## VOLUME DATES

References are to volume, number and page. Date of publication has been omitted to conserve space. There are two multi-number volumes [26(1-4) and 27(3-4)] and one supplement [17(S)]. A list of volumes with seasonal dates follows. Year of publication is listed, in ( ), if different than seasonal date.
